LISSAFIRE: Lissajous-figure Reconstruction for nonlinear polarization tomography of bichromatic fields

Introduction

Readme

LISSAFIRE is a Mathematica package for reconstructing the polarization Lissajous figures of bichromatic $\omega : 2\,\omega$ light-beam combinations, as described in the paper

• Knotting fractional-order knots with the polarization state of light. E. Pisanty et al. *Nature Photonics*, in press (2019), arXiv:1808.05193.

```
(* LISSAFIRE: Lissajous-
  figure Reconstruction for nonlinear polarization tomography of bichromatic fields. *)
(* © Emilio Pisanty, 2019 *)

(* For more information,see https://github.com/episanty/LISSAFIRE *)

Licensing

This code is dual-licensed under the GPL and CC-BY-SA licenses; you are free to use, modify, and redistribute it, but you must abide by the terms in either of those licenses.

In addition to that *legal* obligation, if you use this code in calculations for an academic publication, you have an *academic* obligation to cite it correctly. For that purpose, please cite the *Nature Photonics* paper above, or use a direct citation to the code such as

E. Pisanty. LISSAFIRE: Lissajous-figure reconstruction for nonlinear polarization tomography of bichromatic fields. https://github.com/episanty/LISSAFIRE (2019).

If you wish to include a DOI in your citation, please use one of the numbered-version releases.

Implementation

Initialization and package infrastructure

Package initialization

```
BeginPackage["LISSAFIRE`"];
```

Version number

The variable $LISSAFIREversion gives the version of the LISSAFIRE package currently loaded, and its timestamp

```
$LISSAFIREversion::usage = "$LISSAFIREversion prints the
    current version of the LISSAFIRE package in use and its timestamp.";
$LISSAFIREtimestamp::usage = "$LISSAFIREtimestamp prints the timestamp
    of the current version of the LISSAFIRE package.";
Begin["`Private`"];
$LISSAFIREversion := "LISSAFIRE v1.0.1, " <> $LISSAFIREtimestamp;
End[];
```

The timestamp is updated every time the notebook is saved via an appropriate notebook option, which is set by the code below.

```
In[•]:= SetOptions[
  EvaluationNotebook[],
  NotebookEventActions → {{"MenuCommand", "Save"} :→ (
      NotebookWrite[
       Cells[CellTags → "version-timestamp"][[1]],
       Cell[
        BoxData[RowBox[
          {"Begin[\"`Private`\"];$LISSAFIREtimestamp=\"" <> DateString[] <> "\";End[];"}]]
        , "Input", InitializationCell → True, CellTags → "version-timestamp"
       ], None, AutoScroll → False];
      NotebookSave[]
     ), PassEventsDown → True}
 ];
```

To reset this behaviour to normal, evaluate the cell below

```
SetOptions[EvaluationNotebook[],
 NotebookEventActions → {{"MenuCommand", "Save"} :→ (NotebookSave[]), PassEventsDown → True}]
```

Timestamp

```
Begin["`Private`"]; $LISSAFIREtimestamp = "Tue 23 Apr 2019 20:42:31"; End[];
```

Directory

```
$LISSAFIREdirectory::usage = "$LISSAFIREdirectory is the
    directory where the current LISSAFIRE package instance is located.";
```

```
Begin["`Private`"];
With[{softLinkTestString = StringSplit[StringJoin[ReadList[
       "! ls -la " <> StringReplace[$InputFileName, {" " → "\\ "}], String]], " -> "]},
  If[Length[softLinkTestString] > 1, (*Testing in case $InputFileName
    is a soft link to the actual directory.*)
   $LISSAFIREdirectory = StringReplace[DirectoryName[softLinkTestString[[2]]],
     {" " → "\\ "}],
   $LISSAFIREdirectory = StringReplace[DirectoryName[$InputFileName], {" " → "\\ "}];
  ]];
End[];
```

Git commit hash and message

```
$LISSAFIREcommit::usage =
  "$LISSAFIREcommit returns the git commit log at the location of the
    LISSAFIRE package if there is one.";
$LISSAFIREcommit::OS = "$LISSAFIREcommit has only been tested on Linux.";
```

```
Begin["`Private`"];
$LISSAFIREcommit := (If[$OperatingSystem ≠ "Unix", Message[$LISSAFIREcommit::OS]];
   StringJoin[
    Riffle[ReadList["!cd " <> $LISSAFIREdirectory <> " && git log -1", String], {"\n"}]]);
End[];
```

UnitE

```
UnitE::usage = "UnitE[1] and UnitE[-1] return, respectively, 1/√2{1,ⅈ} and 1/√2{1,-ⅈ}.";
Begin["`Private`"];
UnitE[1] = 1/√2 {1, ⅈ};
UnitE[-1] = 1/√2 {1, -ⅈ};
End[];
```

EnsureRightCircularFundamental

```
EnsureRightCircularFundamental::usage =
  "EnsureRightCircularFundamental[{E1p,E1m,E2p,E2m}] ensures that
    the fundamental has right-circular polarization (i.e. |E1p|>|E1m|)
    by swapping the input to {E1m*,E1p*,E2m*,E2p*} if necessary.";

Begin["`Private`"];
EnsureRightCircularFundamental[{E1p_, E1m_, E2p_, E2m_}] := If[
  Abs[E1p] > Abs[E1m],
  {E1p, E1m, E2p, E2m},
  {E1m*, E1p*, E2m*, E2p*}
 ]
End[];
```

PhaseNormalization

```
PhaseNormalization::usage =
  "PhaseNormalization[{E1p,E1m,E2p,E2m}] Normalizes the field phases
    so that E1p is real and positive, by multiplying by
    an appropriate factor of e^(-i ϕ) on E1 and e^(-2 i ϕ) on E2.";

Begin["`Private`"];
PhaseNormalization[{E1p_, E1m_, E2p_, E2m_}] := With[{ϕ = Arg[E1p]},
  Chop[Times[
    {e^(-i ϕ), e^(-i ϕ), e^(-2 i ϕ), e^(-2 i ϕ)},
    {E1p, E1m, E2p, E2m}
   ]]
 ]
End[];
```

NLPTOutcomes

```
NLPTOutcomes::usage =
  "NLPTOutcomes[{ReE1p,ImE1p,ReE1m,ImE1m,ReE2p,ImE2p,ReE2m,ImE2m}] Calculates
    the Nonlinear Polarization Tomography outcome functions Iₙ, as
    defined in the paper, with the normalization set so that the
    ℓ>0 components of the paper are given by I_ℓ^paper(θ)=Re(2I_ℓ e^(iℓθ)).

NLPTOutcomes[{E1p,E1m,E2p,E2m}] Uses explicit complex amplitudes.";

Begin["`Private`"];
